

The diagram illustrates six types of box plots, labeled I through IV, arranged horizontally. Each box plot is a rectangle with a central box and whiskers extending from the top and bottom. The types are distinguished by color and internal structure: Type I is red with a horizontal line; Type II is blue with a horizontal line; Type IIIA is green with a horizontal line; Type IIIB is dark blue with a horizontal line; Type IV is orange with a horizontal line. The labels I, II, IIIA, IIIB, and IV are placed to the right of their respective box plots.

The diagram shows six box plots arranged horizontally, labeled I through IV. Each box plot has a central box with a horizontal line representing the median, and whiskers extending to the minimum and maximum values. The colors and internal structures are as follows:

- I**: Red box with a horizontal line at the bottom.
- II**: Light blue box with a horizontal line at the bottom.
- III A**: Green box with a horizontal line at the bottom.
- III B**: Dark blue box with a horizontal line at the bottom.
- IV**: Orange box with a horizontal line at the bottom.

The diagram shows six box plots arranged horizontally, labeled I through IV. Each box plot has a colored box with horizontal lines inside, representing data distribution. The colors are: I (red), II (light blue), IIIA (teal), IIIB (dark blue), and IV (orange). Each box plot has a vertical line (median) and horizontal lines (quartiles). The labels I, II, IIIA, IIIB, and IV are placed to the right of their respective box plots.
